3)StageSeat – Event Booking Experience

OVERVIEW

StageSeat is a desktop-based event booking platform designed to simplify how users discover, explore, and book tickets for live events such as concerts, comedy shows, and DJ nights. The goal was to create a seamless and intuitive booking flow for a data-rich selection process.

PROBLEM STATEMENT

Users often face difficulty while booking event tickets due to cluttered interfaces, confusing seat selection, and lack of decision support. The challenge was to design a clear and efficient experience that helps users quickly discover events, evaluate options, and complete bookings without friction.

SOLUTION

Designed a structured booking flow with clear information hierarchy, simplified seat selection, and real-time feedback. Introduced AI-assisted suggestions to help users choose optimal seats and sections, improving decision-making and reducing effort.

TARGET USERS

- Young adults attending concerts and live events
- Working professionals booking weekend activities
- Users looking for quick and easy ticket booking

DESIGN APPROACH

Focused on clarity, minimal cognitive load, and guided decision-making. The interface uses visual hierarchy, structured layouts, and progressive disclosure to help users move smoothly from discovery to booking.

KEY FEATURES

- Smart search with categorized suggestions
- Filter-based event discovery
- Interactive seat selection with real-time updates
- AI suggestions for best seats and value sections
- Simplified checkout experience
- Booking confirmation and tracking

Profile

DESIGN SYSTEM

Used an emerald green luxury theme to create a premium and immersive experience. Maintained consistency in typography, spacing, and component styling across all screens.

AI INTEGRATION

Incorporated lightweight AI assistance by highlighting recommended seats and suggesting best-value sections based on visibility and pricing, helping users make faster decisions.

CONSTRAINTS & ASSUMPTIONS

- Authentication flow was assumed (out of scope)
- Focus was on UX clarity rather than full interaction prototyping

OUTCOME

The final design delivers a clean and intuitive booking experience with reduced complexity in seat selection and improved decision-making support.

LEARNINGS

This project helped in understanding how to design for complex selection systems, maintain visual hierarchy in data-heavy interfaces, and balance usability with aesthetic appeal.
